**Subject:** Special Student opportunity

**Importance:** High

Hi Julie,

I have a student that is ready to do an internship that has special qualifications. She is a full time TSA sworn officer with full background. I have two instrument companies interested in evaluating their portable Near-IR and another with a Raman that are interested in doing a study comparing their results with that of the standard laboratory analyses.

Because of her background, she could easily work on her own, taking little time from your regular employees. I think this is a great opportunity to evaluate these instruments for potential field use. If they are good enough, they could reduce the workload in the lab.

The student is ready to go at any time, so I am interested to seeing if you are interested in getting her in.

Best regards,

*Ed Bartick*
